

Hobbock

Hobbock is for hefty goods - a container designed for bulky products and ideal for building materials. The closure mechanism is designed for efficient re-closure and storage of the product after breaking the tamper evidence.

Key benefits

- Sturdy, safe and strong
- Perfect for high volume packaging
- Deep grips for better handling
- Easy to open and close
- Minimised risk of damage during transportation
- Tamper evidence
- Protective collar
- Insert option

Robust design

Sturdy, safe and strong. In a nutshell, these are words that best describe Hobbock, our functional packaging solution for high volume or bulky products. The robust design is perfect for building materials or chemical products as it minimises the risk of damage during transportation. Hobbock is also suitable for other kinds of goods that need a strong packaging such as pet food, fruit pulp and household detergents.

Great functionality

From production to end use, the Hobbock container is easy to handle even though the content is of heavy weight. The container has wide and deep grips that make it convenient to carry and easy to open and close. Its tamper evidence and closure system provides for high product safety, child proofing and proof of fresh and untouched content. Tamper evidence on the lid is an optional feature.

Many sizes and variations

With Hobbock you have the choice of a broad range of sizes from 17.5 to 42 litres. You can select a steel handle with roller grip or a body grip and up to six colours for your brand display in high quality offset decoration. In-Mould Labelling is available for some sizes.

Safety and environment

The Hobbock packaging solution offers you safe logistical performance in high volume containers. The container is 100 per cent liquid tight and guarantees high product safety and hygienic standards, as well as product reliability. Hobbock is made of polypropylene that can be reused, recycled or disposed of in an environmentally friendly way.

Insert option

For several sizes a top profile fits to an insert giving you the option of combining two items in one packaging, like for example two-component adhesives, for the convenience of your customers.

Volume under lid (l)	Dim. (mm)	Base	Lids							Optional	
			Peel-off	Tamper Evidence	Special Flex-off	Membrane	TE	Decoration	Handle	Handle
