

Packaging weight is cut to the bone in CombiLight™ pot

A convincing combination

With a resource efficient combination of natural fibres and plastic Berry Superfos has created the lightweight CombiLight™ pot. It is a pioneering solution, comprising an invisible plastic structure which supports a coated fibre pot. The pot is membrane sealed and comes with several lid options such as injection moulded PP lid, thermoformed PP as well as R-PET (recycled PET) lid and fibre* lid.

Responsible

Strong

Lightweight

Reduced plastic content

The CombiLight™ pot is made from an injection moulded polypropylene (PP) structure combined with barrier coated paperboard. A structure in PET is also available.

The result is a lightweight packaging with a minimum amount of plastic. Compared to other similar solutions, the plastic content is cut by up to 60 per cent in the CombiLight™ range, which is compatible with your existing filling lines.

Perfect for all types of dairy and more

The packaging is strong, responsible and eye-catching and your artwork decoration is made in offset print on the fibre label. The CombiLight™ pot is particularly suitable for dairy such as yogurt, cream cheese and cottage cheese, but also ideal for other food products which do not require hot filling: spreads, cookies and confectionery, for instance. The available sizes are 210 ml, 245 ml, 360* ml, 460 ml and 560 ml – additional ones are underway.

**Under development*

Log No.	Volume brimful	Total weight (g)	Weight PP (g)	Weight Fibre (g)	Diam. Top (mm)	Material	Decoration
5946	210 ml	5.2	2.3	2.9	95	PP/PE & barrier coated paperboard	Offset print on paperboard
5947	245 ml	5.6	2.4	3.2	95	PP/PE & barrier coated paperboard	Offset print on paperboard
5948	360* ml	7.2	2.9	4.3	95	PP/PE & barrier coated paperboard	Offset print on paperboard
5949	460 ml	8.7	3.2	5.5	95	PP/PE & barrier coated paperboard	Offset print on paperboard
5950	560 ml	9.6	3.3	6.3	95	PP/PE & barrier coated paperboard	Offset print on paperboard
