

## PET Range

PET blow moulded containers clearly form a perfect match for an array of food and non-food products to be stored at ambient temperatures. The excellent clarity and design flexibility are among the many advantages of this packaging solution.

### Key Benefits

- Excellent clarity
- Made of recyclable material
- Wide pre-form library
- Cost-effective bespoke options
- Sleeves are available

### Make it clear with PET

PET containers represent a great solution for packaging a range of food and non-food products stored at ambient temperatures. If you want to enhance the visibility of your products on shelf in jar type packaging, opt for the PET pots and containers from Berry Superfos. They offer you excellent clarity – and clear packaging helps you to communicate trust, authenticity and quality.

PET containers are widely used for chocolate, sweets, peanut butter, herbs, spices and powdered products such as hot chocolate mix. When it comes to non-food products, washing gel pouches, toys, garden items etc. are examples of contents which work well in PET pots, jars and containers.

### Design flexibility

As a material, PET is recognised for its versatility and Berry Superfos is proud to offer you an extensive pre-form library. If you require a particular shape for your packaging, the blow moulding production method allows for cost-effective design flexibility and therefore virtually any bespoke solution. Why not use PET containers for a seasonal promotion or to signpost a commercial anniversary?

### Sleeves or self-adhesive labelling

The pots and containers in the PET range are made from clear polyethylene-terephthalate, and clarity is a key quality in itself. However, for an extra visual splash, you can use sleeves for decoration. Another option is self-adhesive labelling PE. Lids are available in several shapes and eye-catching colours which ensure better shelf stand-out.

Whatever your preference, you can count on Berry Superfos for advice and technical support so that the final result looks just the way you want it to.

# PET Range

Volume under lid (ml)	Dim. Neck (mm)	Neck Type	Height (mm)	Weight (g)	Name
