

# SuperCube®

SuperCube® is a square or rectangular container which gives you a dual advantage: space efficiency and product differentiation.

## Key Benefits

- Space efficient shape
- Broad product range and many sizes
- Easy to open peel-off lid
- Tamper evidence
- Convenient diagonal handle for easy emptying
- Flake Free texture on lid for selected sizes
- Large display surface
- Metallic look available

## A plus for your logistics

Every detail counts when you want to make the most of warehousing and transportation. The shape of your packaging is one of them. Take advantage of the square SuperCube® container - you can make more square units fit in a confined space compared to round packaging units. It reduces warehousing space consumption and consequently logistical costs in a smart and easy way. Another point is that it is easier to transport and to stack square containers in the stores and there is room for more containers on one pallet. This is a clear advantage as SuperCube® is particularly suitable for heavy content like building materials, paint and garden products; and also appropriate for bulky pet food.

## Exceptional functionality in many sizes

Convenient diagonal handles ensure easy emptying; an advantage for professionals and private users alike. Plastic handles are available in standard colours. SuperCube® is well suited for paint. For selected sizes you can choose a roller tray solution that allows the user to roll the paint on a roller directly from the container. Another addition is FlakeFree® lids to prevent unwanted flakes to fall into the paint. The packaging is available in a broad range of sizes; from 1.1 litres 145 x 95 mm rectangular or square to 17 litres. This gives you the option of launching a 'family image' for a brand packed in many different sizes.

## Looks matter

The shape of SuperCube® offers a large, uninterrupted decoration area – an excellent display place for your brand name which makes your product easily recognisable on shelves. Almost endless decoration options are available for all sizes with In-Mould Labelling. SuperCube® is obviously a plastic container - but if you want, you can also add the look of metal. This option gives the container an exclusive look for your premium products. And it is smart to be square or rectangular: the shape itself will make your product stand out of the crowd if your market is dominated by round containers.

## Hassle-free opening

All sizes of SuperCube® come with peel-off lids that are easy to open. There are no sharp edges; this makes the opening completely hassle-free and the design renders it very clear where to open the SuperCube® container. For selected sizes we also offer tamper evidence on the lid instead of on the container body. Here, the opening mechanism and the tamper evidence are integrated, which makes it even easier to open the lid.
